

Brief Introduction

I. Main Content

Statistics in this chapter mainly show the basic situation and operation of construction enterprises in Beijing. Main indicators include number of enterprises, gross output value of the construction sector, as well as floor space, profits, and tax of construction enterprises.

II. Scope of Statistics

Since 2004, data on construction sector, which previously covered construction enterprises with independent accounting at or above Level-4 in construction qualifications, have been adjusted to cover all construction enterprises with qualifications of general and specialized contracting.

III. Methods of Survey

Data on construction enterprises in this chapter were gathered based on *Statistical Statement System for Construction Sector* developed by the National Bureau of Statistics. The figures were gained through complete survey.

IV. Changes in Relevant Statistical Standards

Classification of construction sectors during 2002-2011

was based on the standards in the *Classification of National Economic Sectors* (GB/T 4754-2002). The standards in the *Classification of National Economic Sectors* (GB/T 4754-2011) were implemented from 2012 to 2017. The standards in the *Classification of National Economic Sectors* (GB/T 4754-2017) are implemented since 2018.

V. Adjustment to Historical Data

As “the first national economic census in Beijing” was conducted in 2004, in accordance with the unified requirements and methods of the National Bureau of Statistics, the data on gross output value of construction sector during 1993-2003 were adjusted by “trend deviation method” based on the census results. The data for 2004 were collected from the first national economic census in Beijing, the data for 2008 were collected from the second national economic census in Beijing, the data for 2013 were collected from the third national economic census in Beijing, and the data for 2018 were collected from the fourth national economic census in Beijing.
